Junior Full Stack Developer: Trial Brief

What this is

A short, paid trial where you work as an MVL developer on a small client project. We pay £50 for your time, whatever the outcome.

Everything you need is in this brief and the starter project attached to our email (tallyroom-starter.zip).

Camera on, always

MVL is a client-facing business. When you present your work, your camera must be on. We won't review a video without camera.

Before you start

Reply to our email and tell us when you'll send your work back. You decide the date and time.

If it's going to slip, tell us before it arrives.

Your client

Tallyroom is a client portal for a small accountancy firm. The firm's clients log in, upload receipts and invoices, and see which documents are still outstanding. It's built with Next.js and Supabase.

Your client contact at the firm is Priya Shah, Operations Manager. Her email is at the end of this brief. Read it, work out what needs doing, and do it.

How we work

- Work in your own GitHub account. Create a new repository and push the starter code, unchanged, as your first commit.
- Run it against your own free Supabase project. The README in the starter project tells you how to set it up.
- We work with Issues, a branch for each piece of work, and a pull request for each, using the template in the repository.
- Use AI tools as much as you like. We do.
- Write a reply to Priya exactly as you'd send it to a client.

Present it back

Record one video, camera on, with your screen shared. No longer than 10 minutes.

Part 1: your own project

Open the project you linked in your application and answer these three questions, in this order:

1. Show us the part of the code you're proudest of. Why is it built that way?
2. Show us something that broke while you were building it. How did you find the cause?
3. Where did AI help you on this project, and where did you have to correct it?

Part 2: Tallyroom

Walk us through what you did for Priya, what you didn't get to, and why.

What to send back, by the time you gave us

Reply to our email with:

- the link to your repository (if it's private, add zoe.makin@minimalviablelaunch.io as a collaborator)
- your reply to Priya
- the link to your video

Email from Priya

From: Priya Shah, Operations Manager

Subject: Tallyroom: a few things from our side

Hi,

I'm Priya, Operations Manager at the firm. Zoe said you're picking up Tallyroom, so thank you.

First, and most urgent: since yesterday's update our clients can't see any of their documents when they log in. We've had several calls this morning and a couple of them are asking whether their data has gone. Can you tell me what's happening?

Second, we'd like the portal to chase clients for us. If a document is more than a week overdue, the client should get an automatic reminder email. Dan, who looks after our IT, manages our email and will send you the login details for it.

And one more from the partners' meeting yesterday: they'd like those reminders to go out by text message as well. We have a board meeting tomorrow morning and it would be great to show both working by then. Is that doable?

Thanks,

Priya
